

How to Find Your Kindroid API Key and AI ID

Before you can export a chat, you need two things from Kindroid:

- Your Kindroid API key
- The AI ID for the specific Kindroid character you want to export

The API key allows the script to connect to your Kindroid account. The AI ID tells the script which character's chat history to download.

How to Find Your Kindroid API Key

1. Go to:

`https://www.kindroid.ai`

1. Log in to your Kindroid account.
2. Click the menu.
3. Click **General**.
4. Scroll all the way to the bottom.
5. Click **API and Advanced Integrations**.
6. Click the **Get API key** button.
7. Click the copy icon to copy your API key.

Your API key should start with:

`kn_`

Treat this key like a password. Do not post it publicly, upload it to GitHub, or share it with anyone you do not trust.

How to Find Your AI ID

The AI ID is found in the same place as your API key.

1. Go to:

<https://www.kindroid.ai>

1. Log in to your Kindroid account.
2. Click the menu.
3. Click **General**.
4. Scroll all the way to the bottom.
5. Click **API and Advanced Integrations**.
6. Look directly below the API key section.

You should see something labeled with your character's name, such as:

Joe's AI ID

or:

Lisa's AI ID

Click the copy icon next to the AI ID.

This is the value you paste into the script when it asks:

Enter the AI ID to export:

Make sure you copy the AI ID for the specific character you want to export. If you have multiple Kindroids, each one may have a different AI ID.
